

CHYAVAN MYSORE CHANDRASHEKAR

chyavan.m.c@utexas.edu • (737) 275-8719 • [LinkedIn](#) • [Portfolio](#) • [GitHub](#)

TECHNICAL SKILLS

Programming: Python (Pandas, NumPy, Scikit-learn, TensorFlow, SciPy, Gurobi, Selenium), SQL, R, JavaScript, HTML, CSS

Technologies & Tools: GCP (BigQuery, Vertex AI), AWS (SageMaker, Athena, EC2), Git, Snowflake, Jira, Confluence, R-Studio, Claude

Skills: Statistical Analysis, Optimization, Healthcare Domain Analytics, Data Pipeline Development, Business Strategy & Metric Design

EXPERIENCE

CVS Shared Services Resources LLC – *Data Scientist*, New York City, New York

Mar 2025 – Present

- Served as the sole Data Scientist on Smart Provider Finder (SPF), an analytics-driven platform enabling 1,500+ Aetna clinical and service staff to identify in-network, high-quality, low-cost providers; delivering 50–67% time savings per search and driving a 40% increase in high-quality PCP visits with an estimated \$276–\$1,034 in annual medical cost savings per member
- Categorized 3,000+ Durable Medical Equipment (DME) procedures into 50 clinically meaningful products, enabling product-level provider filtering within SPF, reducing member time sink in finding care; initiative later adopted by partner Aetna Health teams
- Applied machine learning techniques of regression, classification, and clustering during feature development and exploratory data analysis to establish statistical thresholds, validate data distributions, and surface trends in provider and clinical datasets
- Expanded the product's searchable procedure catalog from ~1,200 to ~9,000 and onboarded new specialties, subspecialties, products and diagnosis classifications collaborating with analytics teams, broadening member access to specialized care options
- Integrated AI-assisted tools to my workflow to accelerate product EDA and feature scripting, QA triage, and report prototyping

Huntington National Bank – *Decision Scientist*, Columbus, Ohio

Jan 2024 – Mar 2025

- Translated a business case for optimizing banking transfer limits into a data-driven analysis and employed statistical learning methods to identify potential limits with an estimated impact of \$133M annually and enhanced digital user experience
- Created digital personas using Hierarchical Agglomerative Clustering to analyze different customer behaviors in the digital channel, facilitating decision-making for digital channel strategies and tactics
- Ideated and implemented automated report generation (Python, Selenium, AWS) delivering time-sensitive reports to stakeholders automatically, resulting in significant time savings equivalent to the daily effort of a dedicated data analyst
- Responsible for defining (Snowflake, MS SQL Server, AWS) and analyzing (R, Python) the data necessary to build long-term strategies for the bank's digital channel and make recommendations to the product, marketing, and data & analytics team

The University of Texas at Austin – *Research Assistant*, Austin, Texas

Jun 2023 – Jan 2024

- Identify the capabilities of NLPs, LLMs, diffusion models, generative AI technologies, and their adaptation in data science tools
- Generalize an approach to promote critical thinking, productivity, and AI literacy in the post-LLM era in technical education

Affinity Answers – *Data Scientist Intern*, Austin, Texas

Jan 2023 – May 2023

- Developed brand-specific forecasting models (ARIMA, SARIMA) integrating transactional and FRED data with a novel anomaly metric; deployed AWS data infrastructure (Athena, SageMaker) processing 12B+ transactions from 9M users
- Conducted cluster analysis on brands to gain insights into correlated brands and consumer preferences, leading to highly successful outlet expansion recommendations driving a significant increase in monthly revenue of over \$100,000 for every outlet

Western Digital – *Software Development Engineer*, Bangalore, India

Jan 2020 – Jun 2022

- Developed an analytical reporting and automation solution (MS SQL Server, .NET, Angular) used by over 10,000 users across 50 labs in 4 countries and delivered latency improvements and enhancements resulting in a performance boost of over 300%
- Managed a team of engineers in developing a comprehensive lab management dashboard, enhancing drive monitoring, optimizing utilization, and providing a high-level overview of performance, health, and storage across different drive categories
- Integrated predictive and diagnostic models with real-time data for validation and failure analysis of Enterprise and Client SSDs
- Created a comprehensive performance monitoring system that integrated Google Analytics enabling continuous insights into critical Web and API performance for ongoing enhancement opportunities

EDUCATION

The University of Texas at Austin

May 2023

Master of Science, Business Analytics (GPA: 3.93/4)

- Coursework:** Optimization, Time Series Analysis, Marketing Analytics, Demand Analytics & Pricing, Advanced Machine Learning

JSS Science & Technology University

Sep 2020

Bachelor of Engineering, Electronics & Communication (GPA: 9.11/10)

- Coursework:** Data Structures & Algorithms, Advanced Calculus, Linear Algebra, Statistics, Probability, Information Theory
